

HIGH-INSULATED PALLET CONTAINERS

High-insulated pallet containers

- Polyurethane (PUR) insulation.
- Available in sizes 300, 350, 400, 450, 460, 600, 660, 700, 1000, 1010 and 1400.

High degree of insulation

Well suited to very high-or low temperature conditions.

PUR gives these pallet containers particularly high insulating properties. PUR containers keep the temperature of their contents constant. In cold climates they can prevent freezing and in warm climates keep the content chilled.

High temperatures

It's not advisable to store fluids in these containers at a higher temperature than 35-40°C. Borgarplast's heavy-duty pallet containers are more suitable for such applications.

Difference from heavy-duty pallet containers

Heavy-duty pallet containers are insulated with a Polyethylene (PE) layer and have lower insulating properties. Heavy-duty containers are heavier and recyclable, can withstand higher temperatures and have higher loading capacity.
